WE HAVE THE SOLUTION!

WellZone® 2-Wire & 3-Wire Pressure Controller

Single Phase Well Pump Control Panel

The next generation of single phase pump controls offering enhanced reliability, precise monitoring, and automated fault detection, ensuring the motor operates within safe limits without the need for constant manual intervention.

Problems

- Too much load causing your motor to **overload**?
- Are voltage irregularities causing **premature motor failures**?
- Are insufficient flow conditions causing you to lose pump ends due to **dry run**?
- Are **pressure switches** causing your system to run below optimal performance?
- Tired of having to buy **multiple components** to help protect your pump system?

Solution

The **WellZone® Pressure Controller** offers precise digital tuning for your system, allowing you to fine-tune performance to meet specific needs.

It ensures superior motor protection and delivers accurate pressure readings with the use of a high-precision transducer.

An easy-to-read LCD screen, making setup quick and simple. It also provides real-time visibility into your motor's performance, allowing for seamless monitoring and adjustments.

Results

- + **Protecting the motor** saves premature failures.
- + Providing accurate and **constant voltage and amperage** allows you to run at **peak efficiency**.
- + Transducer based giving you the most **accurate readings**.
- + Providing the ability to **troubleshoot** the pumping system **before the pump is damaged**.
- + Allowing you to have **starting components and protect all in one device**.
