

NEED A QUICKER AND SIMPLER SETUP
WITHOUT SACRIFICING ANY OF THE
FEATURES OF A VFD APPLICATION?

WE HAVE THE SOLUTION!

H2O Drive® Constant Pressure Controller

The next-generation H2O Drive® VFD provides an effortless two-step setup, ensuring quick and efficient motor protection while delivering optimal performance with ease and speed.

Problems

- Spending too much **time** on a jobsite programming your VFD?
- Are voltage irregularities causing **premature motor failures**?
- Are insufficient flow conditions causing you to lose pump ends due to **dry run**?
- Are **limited advanced options** preventing you from fine-tuning your pumping system?
- Tired of **inconsistent setups** across models and having to learn different configurations for the **same product line**?

Solution

The **H2O Drive®** control panel is designed to manage a three-phase submersible well pump in constant pressure control applications.

It guarantees superior motor protection and provides accurate pressure readings through the use of a high-precision transducer

The easy-to-read LCD screen makes setup quick and straightforward, while offering real-time insights into your motor's performance for effortless monitoring and adjustments.

Results

- + The **2-Step Quick Start Menu** makes setup a breeze. As long as you have the working pressure and service factor amps, you're all set to go.
- + Providing accurate and **constant voltage and amperage** allows you to run at **peak efficiency**.
- + With just two easy steps to start, you gain access to a comprehensive **advanced menu for fine-tuning performance** and optimizing your pumping system.
- + The quick start and advanced menus are **uniform across all models**, from 1/2HP to 60HP, streamlining the user experience and **minimizing the time needed to learn different setups**.

SIMPLE • FAST • EASY • EFFICIENT
